

MYCLONEED

Myclobutanil 10% WP

MYCLONEED is a systemic powdery mildewcide; having dual action of preventing & controlling Powdery mildew. It is having lowest waiting period among other powdery mildewcide. MYCLONEED belongs to the triazole group.

Mode of Action

MYCLONEED is a highly systemic, effective fungicide for powdery mildew. Its absorption into plant is very fast, which provides long duration of control.

Features & Benefits

- MYCLONEED when used as a preventive measure, prevents infection from occurring at all.

- MYCLONEED even if applied up to 96 hours, after infection process has started, kills the infections or germinating spores before infection becomes established.
