

CARTAKIND

Cartap Hydrochloride 50% SP

CARTAKIND is an insecticide that contains nereistoxin a natural toxin derived from marine annelid which gives effective control on biting, chewing, and sucking types of insects by paralyzing their Central Nervous System

Mode of Action

A systemic [insecticide](#) that can effectively control all stages of insects by its contact and stomach action

Features & Benefits

- A broad spectrum systemic insecticide with contact and stomach mode of action.
- Quick and prolonged results on biting chewing and sucking insects
- Controls all three stages of insect – Egg, Larva, and Adult.

- Compatible with almost all [fungicides](#) and Insecticides.
- Safe for beneficial insects and nontoxic to mammals.
- Single-molecule for biting, Chewing, and sucking pests.
- Effective on all stages of the insect.
- Do not harm the beneficial insects and mammals.
- This leads to higher yield and thus an increase in profit.
- Ease to sell good quality crops in the market.
- Fewer sprays so lower input cost.
