

## AMINASTO

### Ametryne 80% WDG

AMINASTO is a selective early post emergence herbicide on Sugarcane, which has broad-spectrum activity on grasses and broad-leaved weeds.

## Mode of Action

AMINASTO is selective, systemic and absorbed through foliage and roots. It also inhibits photosynthesis.

## Features & Benefits

- AMINASTO belongs to the s-Triazine chemical group, which inhibits Photosynthetic reaction in weeds.
- AMINASTO has both foliar and soil activity. By this, it kills the existing weeds & the new emergence from weed seeds. It is compatible with 2, 4-D.

- AMINASTO shall be applied when Sugarcane weeds are at 2-4 leaf stage. It provides longer duration of weed control.
- AMINASTO protects sugarcane from early slow growth of sugarcane tillers from weed competition.

## Crop Recommendation

CROPS	TARGET PEST/ DISEASE	DOSAGE
 Sugarcane	Dactyloctenium aegyptium, Digitaria sanguinalis, Cynodon dactylon, Ageratum conyzoides, Trianthema monogyna, Parthenium hysterophorus	1 kg

## Pack Sizes

1 kg
