

EMANEED – PLUS

Novaluron 5.25% + Emamectin Benzoate 0.9% SC

Emaneed plus with its 2-way action controls a wide range of lepidopteran pests and controls the loss of yield caused by them.

Mode of Action

Through its 2 way of action - Neuromuscular and Biochemical process it gives effective, Quick, and long results on a wide range of Lepidopteran pests

1) Neuromuscular process - it prevents contraction of muscles permanently leading to paralysis and permanent death of insects.

2) Biochemical process - It acts as a Chitin synthesis inhibitor which prevents the insect to move to the next instar stage and finally dies.

Features & Benefits

- It's a broad-spectrum [insecticide](#) that controls a wide range of lepidopteran caterpillars.
- Quick and prolonged results.
- Effective for Insect Resistance management because of its dual mode of action.
- Safe for farmers and crops.
- Because of its phytotonic effect, it helps lush green crops.
- Good quality yield, hence more profit.
- Less number of sprays reduces input costs.
- Stops crop damage immediately and minimizes crop loss.
- Increase in Chlorophyll hence the lush green crop.

Crop Recommendation

CROPS	TARGET PEST/ DISEASE	DOSAGE
 Cabbage	DBM, Tobacco Caterpillar	350 ml/acre
 Chilli	Fruit borer, Tobacco Caterpillar	350 ml/acre
 Red gram	Pod Borer	350 ml/acre
 Paddy	Stem Borer	600 ml/acre

Pack Sizes

100 ml	250 ml	500 ml	1 Ltr
