

MANKIND SULFUR

Sulphur 80% WDG

MANKIND SULFUR (Sulphur 80% W.D.G.) is dust-free flowable micronized water dispersible granules containing 80% sulphur as the active ingredient and balance adjuvants 20% w/w. Useful for grapes, mango, cumin, cowpea, guar, pea and apple.

Mode of Action

Fungicidal Action: Sulfur is toxic to a wide range of fungal pathogens. It disrupts the metabolism of fungal cells, inhibiting spore germination and growth. It also prevents the formation of fungal cell walls, making it difficult for fungi to infect the plant. **Miticidal Action:** Sulfur acts as a contact miticide, suffocating and disrupting the metabolism of certain mite species. It is effective against mites like the two-spotted spider mite and rust mites. **Insecticidal Action:** Sulfur can also affect certain insect pests by disrupting their respiratory systems, ultimately leading to their death.

Features & Benefits

- **Effective Fungicide and Miticide:** Mankind Sulfur controls a broad range of fungal diseases and mites, especially on crops like grapes, apples, and citrus.
- **Multi-purpose:** Mankind Sulfur acts as a fungicide, miticide, and insecticide, offering versatile protection for crops.
- **Eco-friendly:** Mankind Sulfur, a naturally occurring element, is safe for beneficial insects and the environment when used correctly.
- **Easy Application:** Mankind Sulfur comes in water-dispersible granules that are easily mixed with water for hassle-free spray application.
- **Low Toxicity:** Mankind Sulfur has low toxicity to humans and animals when used as directed and is approved for organic farming in many regions.
