

Agrikind Unisect

Agrikind Unisect Insecticide, containing Thiocyclam Hydrogen Oxalate 3.0% and Clothianidin 1.2% GR, offers broad-spectrum control against various pests in paddy crops. Its dual mode of action delivers fast knockdown and long-lasting protection.

Mode Of Action

- **Thiocyclam Hydrogen Oxalate – Nereistoxin analogue:** Inside the insect, it converts to nereistoxin. Binds to nicotinic acetylcholine receptors (nAChRs) in the nervous system, blocking nerve signal transmission which causes loss of coordination, paralysis, and death.
- **Clothianidin – Neonicotinoid insecticide:** Directly binds to nicotinic acetylcholine receptors in the insect's central nervous system. Causes continuous nerve stimulation, over-excitation of neurons, followed by paralysis and death.

Features & Benefits

- Two powerful active ingredients Thiocyclam Hydrogen Oxalate and Clothianidin for superior efficacy
- Long-lasting protection from both hidden and visible pests
- Effective control on chewing and sucking pests like Stem Borer, White Backed Plant Hopper, Leaf Folder, and BPH
- Safe for crops when applied at the recommended dose
- Promotes healthy crop growth and higher yields
